

COLORTEST III

COLOUR METER TO DETERMINE THE ROASTING DEGREE

The third generation colour meter is easy to use as usual and delivers the colour values of ground coffee and other powdered products quickly and reliably. The integrated guide pins and the lateral light shields ensure precise and uncomplicated positioning of the sample in the measuring room and an interference-free measuring environment.

The immediately determined colour value of the sample is shown on the large display with touch function and can be forwarded to a higher-level data management system via the device's various interfaces if required.

The device has an auto-calibration function using the calibration plates integrated in the drawer.

The sample preparation set included in the scope of delivery is easy to use and ensures identical measuring conditions for every sample.

Technical features

- Simple handling
- Non-contact measurement
- Excellent reproducibility of the measured values
- Shielding against interference from ambient light
- Maintenance-free
- Interface for data transfer

Dimensions (W × D × H)	185 × 220 × 255 mm
Weight	6 kg
Power supply	DC 9V / 150 mA
Power consumption	1,35 VA
Data output	USB-C , Ethernet (Option)
Standard accessories	Power supply unit with cable, 2 colour references, 20 sample dishes, sample preparation device
